

STAFF ASSIST

Admin Portal

UX/UI Design Brief

Purpose

To guide the design of the enterprise management portal that will support oversight, operations, campaign administration, reporting, reconciliation, access control and audit for Staff Assist and Onboard & Earn.

Prepared for	Staff Assist UI/UX and Delivery Teams
Source inputs	Staff Assist prototype recording, Business Requirements Document, DMO dashboard metrics, campaign reward schedules and TRB architecture pack
Document status	Updated draft for design elaboration and data-architecture validation
Version	1.1
Date	5 August 2026

0. Document Overview

This document translates the Staff Assist prototype and BRD into a practical design specification for the Admin Portal. It should be used by Product, UI/UX, Engineering, Operations, Compliance, Campaign, Audit and Information Security teams during design elaboration and validation.

Revision 1.1 updates

- Adds the seven DMO commercial-performance metrics at Individual Staff, Operating Group / Business Unit and Overall Bank levels.
- Defines the reporting data architecture, authoritative source systems, required join keys and reporting data-mart expectations.
- Expands the portal design for Staff Rewards, Sustaining Momentum, Milestone and Grand Finale reward administration.
- Separates employee Onboard & Earn rewards from DiamondXtra customer reward programmes.
- Aligns the portal design with the TRB architecture, Service Central artefact repository and AccessMore milestone feeds.

Design intent

The portal should provide enterprise visibility and controlled administrative capability without allowing administrators to perform customer-controlled activities, edit verified customer information or bypass identity, AML, duplicate-account or eligibility controls.

Contents

Sections 1–16	Sections 17–31
1. Background	2. Portal Objectives
3. Product Positioning	4. Primary Users and Roles
5. Information Architecture	6. Global Portal Layout
7. Visual Design Direction	8. Dashboard
9. Data Architecture & Reporting Model	10. Onboarding Journeys
11. Journey Detail	12. Exceptions
13. Artefact Reconciliation	14. Staff & Organisation
15. Campaigns & Rewards	16. Leaderboard
17. Reports & Analytics	18. Consent & Attestation Content
19. Communications	20. Access Management
21. Audit Logs	22. System Health
23. Support Content	24. Status Language
25. Data Privacy & Security	26. Common UI States
27. Responsive & Accessibility	28. Key Workflows to Prototype
29. Minimum Screens to Design	30. Out of Scope
31. Success Criteria	

1. Background

Staff Assist is the enterprise platform through which Bank employees initiate and support customer onboarding, while the customer personally completes the required consent, declarations and attestations.

The staff-facing prototype already provides:

- Employee dashboard and daily targets.
- Customer tracking.
- Onboarding initiation.
- League, points and reward visibility.
- Staff profile and support.
- A four-stage onboarding journey: Account & Consent; Customer Action; Identity Verification; and Review & Create Account.

The proposed Staff Assist Admin Portal will sit above the employee application and provide authorised stakeholders with central visibility, operational control, campaign administration, reporting, reconciliation and audit capabilities.

The portal will also serve as the DMO and campaign-management view for commercial performance. It must combine Staff Assist attribution data with authoritative account, funding, balance, transaction, AccessMore activation and target data from the relevant source systems, rather than treating the Staff Assist operational database as the source of truth for every metric.

2. Portal Objectives

The portal should enable authorised users to:

- Monitor Staff Assist adoption and onboarding performance across the Bank.
- View and investigate individual onboarding journeys.
- Identify journeys requiring attention.
- Manage failed, pending and exception cases.
- Confirm that completed account-opening artefacts have been synchronised into the existing account-opening records portal.
- Monitor employee participation, performance, points, leagues and reward eligibility.
- Configure approved campaign rules, milestones and comparison groups.
- Manage customer-facing consent, attestation and communication content.
- Produce operational, management, campaign, compliance and audit reports.
- Manage elevated user roles and access.
- View complete audit trails without permitting unauthorised changes to customer records or system outcomes.

Control principle

The portal must not allow administrators to impersonate customers, complete customer declarations, edit verified identity information, or casually override identity, AML, duplicate-account or eligibility outcomes.

- Track the seven agreed DMO metrics at Individual Staff, Operating Group / Business Unit and Overall Bank levels.
- Display the source, refresh time, completeness and reconciliation status of commercial-performance data.
- Administer staff reward eligibility across Grand Finale, Milestone and Sustaining Momentum categories.
- Keep Staff Rewards and DiamondXtra Customer Rewards separate in configuration, calculation, approval and reporting.

3. Product Positioning

Employee application

- Initiate customer journeys.
- Facilitate identity verification.
- Monitor the employee's own customers.
- View personal goals, score and league position.

Admin Portal

- Enterprise oversight.
- Operational support.
- Exception management.
- Campaign administration.

- Reporting and analysis.
- Content management.
- Access control.
- Audit and compliance review.

The portal is not a replacement for the existing account-opening records portal. It should integrate with that portal, display artefact-synchronisation status and provide authorised deep links where required.

4. Primary Users and Roles

Role	Can	Cannot
Executive / Management Viewer	View high-level performance; compare entities, divisions, regions, departments and branches; view aggregate campaign and conversion information.	View unnecessary customer-level information; edit journeys, configurations or campaign rules.
Supervisor / Business Manager	View staff and onboarding performance within the authorised scope; view customers requiring staff follow-up; monitor team points, league positions and conversion.	Edit verified customer information; override screening or account-opening outcomes; change campaign rules unless separately authorised.
Operations Support	View journeys and operational statuses; investigate failed or pending journeys; retry approved technical activities; manage operational queues; reconcile artefact-synchronisation failures.	Change declarations; edit verified identity information; override AML or compliance outcomes.
Campaign Administrator	Create and manage campaigns; configure milestones, points, tiers, league cycles, quests and comparison groups; review score and reward exceptions; export reward-eligibility information.	Alter identity-verification or account-opening records; fabricate customer milestones.
Compliance / Financial Crime	View authorised AML and screening outcomes; review referred cases; view declarations where permitted; record approved review decisions.	Alter original declarations; change staff attribution or campaign scores outside an approved compliance action.
Internal Audit	View journey records, consent records, administrator actions, access logs and campaign changes; search and export authorised audit information.	Initiate or modify customer onboarding; change configuration or operational outcomes.
Information Security / Technical Support	View system health, integration failures, access events and security alerts; investigate technical failures.	View unnecessary customer data; modify business, compliance or campaign outcomes.
Staff Assist Administrator	Manage platform configuration, elevated roles, approved content and operational settings; view system-wide status.	Edit verified customer identity; override AML, duplicate-account or facial-verification outcomes.

5. Information Architecture

The desktop navigation should be grouped as follows:

Navigation group	Modules
Overview	Dashboard; Performance Dashboard
Operations	Onboarding Journeys; Exceptions; Artefact Reconciliation
Performance	Staff & Organisation; Staff Rewards; Customer Rewards; Campaigns; Leaderboard; Reports & Analytics
Administration	Consent & Attestation Content; Communications; Metric Definitions & Data Lineage; Access Management; Audit Logs; System Health; Support Content

The employee-facing application uses a simple five-item bottom navigation. The management portal should retain the same clarity but use a desktop left-side navigation, grouped headings and role-based visibility. Users should only see modules they are authorised to access.

6. Global Portal Layout

Header

- Page title.
- Global date range.
- Entity or country selector, where applicable.
- Notification centre.
- Help.
- Logged-in user profile.
- Current role or access scope.

Left navigation

- Collapsible desktop side navigation.

- Clear module icons.
- Active-page indicator.
- Badges for pending exceptions or unresolved failures.

Global search

Provide a global search for journey reference, account-opening reference, account number, customer name, masked phone number, masked email address, staff name and staff ID. Search results must respect the user's role and permitted organisational scope.

7. Visual Design Direction

The portal should feel visually connected to the Staff Assist employee application.

Retain

- Access blue as the primary brand and navigation colour.
- Orange for primary actions.
- White and light-grey content surfaces.
- Rounded cards and status badges.
- Clear progress, points and performance indicators.
- Green for completed or successful outcomes.
- Amber for pending or attention-required states.

Desktop guidance

- Do not convert every item into a large card.
- Use cards for headline metrics and important alerts.
- Use tables for journeys, users, artefacts and audit records.
- Use charts only where they improve comparison or trend analysis.
- Keep the interface professional and operational rather than overly gamified.
- Reserve gamification visuals for campaign, league and reward modules.

8. Dashboard

Purpose

Provide an immediate enterprise or scoped view of acquisition, account opening, funding, deposit mobilisation, digital activation, transaction performance, campaign-target achievement, staff participation and operational risks.

Global filters

- Date range.
- Campaign.
- Entity or country.
- Directorate or division.
- SBU.
- Department.
- Region.
- Branch or location.
- Account type.
- Journey channel.
- Staff grade or approved cohort.

Filters should remain visible in a sticky filter bar.

Performance scope selector

- Individual Staff - performance attributed to a single employee.
- Operating Group / Business Unit - consolidated performance for the selected organisational group.
- Overall Bank - enterprise-wide performance for the selected reporting period.

Authorised users should be able to drill from Overall Bank to Operating Group, Business Unit, department, location and individual staff, subject to access scope.

Core DMO performance metrics

Metric	Individual Staff	Operating Group / Business Unit	Overall Bank
Accounts Opened	Attributed accounts	Total accounts opened	Total accounts opened
Deposit Mobilised (₹)	Attributed deposit value	Total deposit mobilised	Total deposit mobilised
Average Balance per Account	Staff portfolio average	Group / BU average	Bank average
Funded Accounts	Attributed funded accounts	Total funded accounts	Total funded accounts
Funding Rate (%)	Staff funding rate	Group / BU funding rate	Bank funding rate
Digitally Activated / Transacting Customers	Attributed activated / transacting customers	Group / BU total	Bank total
Campaign Target Achievement (%)	Staff target achievement	Group / BU achievement	Overall Bank achievement

Each metric tile should show the actual value, approved target, achievement percentage, previous-period comparison, trend, last refresh time, authoritative source and drill-down action.

Operational onboarding metrics

- Onboarding journeys initiated.
- Customer requirements completed.
- Identity verifications completed.
- Accounts successfully opened.
- Account-opening conversion rate.
- AccessMore activations.
- Activation rate.
- First qualifying transactions.
- First-transaction conversion rate.
- Tier 3 upgrades.
- Participating employees.
- Employees active during the selected period.
- Journeys requiring attention.
- Artefact-synchronisation failures.

Each metric should show the current value, movement versus the previous comparable period and a click-through to the supporting records.

Conversion funnel

1. Journey initiated.
2. Consent and attestation link delivered.
3. Customer requirements completed.
4. Identity verification completed.
5. Account-opening checks passed.
6. Account created.
7. AccessMore activated.
8. First qualifying transaction completed.
9. Tier 3 upgrade completed.

Each stage should show the count, conversion from the previous stage, overall conversion, average completion time and drop-off count. Selecting a stage should open the filtered journey list.

Commercial performance funnel

- Journeys initiated.
- Accounts opened.
- Accounts funded.
- AccessMore activated.
- Customers digitally transacting.

This view should connect onboarding activity to actual commercial value and allow users to identify where accounts fail to fund, activate or transact.

Metric definitions and calculation rules

Metric	Design definition / formula	Business confirmation required
Accounts Opened	Unique successfully created accounts attributed within the selected period.	Confirm treatment of reopened, duplicate, closed or reversed accounts.
Deposit Mobilised	Value attributed to qualifying campaign accounts from the approved core-banking / Treasury source.	Confirm whether this is current balance, closing balance, average balance, gross inflow or net new eligible CASA balance.
Average Balance per Account	Approved qualifying balance divided by the agreed account population.	Confirm whether denominator is all opened accounts or only funded accounts and the averaging period.
Funded Accounts	Accounts that meet the approved minimum funding rule within the prescribed period.	Confirm minimum amount, timing, qualifying balance and whether reversals remove eligibility.
Funding Rate	$\text{Funded Accounts} \div \text{Accounts Opened} \times 100$.	Confirm exclusions and treatment of cancelled or invalid accounts.
Digitally Activated / Transacting Customers	AccessMore activation and qualifying digital-transaction events sourced from AccessMore / approved transaction feeds.	Confirm whether the dashboard should show one combined value or separate Activated and Transacting sub-values.
Campaign Target Achievement	Account-count achievement and CASA achievement against approved targets, with any overall weighted score.	Confirm target hierarchy, weighting and whether both components must meet a minimum threshold.

Data freshness and confidence

- Display the last successful refresh date and time for each metric.
- Display the authoritative source system and applicable calculation version.
- Show whether data is complete, delayed, partially available or under reconciliation.
- Warn users where a source feed is delayed or a metric is based on incomplete data.
- Allow authorised users to view data-lineage details from dashboard value to source record.

Trends

- Journeys initiated over time.
- Accounts opened over time.
- AccessMore activations over time.

- First transactions over time.
- Staff participation over time.

Allow daily, weekly and monthly views.

Performance breakdown

- Top-performing entities.
- Top-performing regions.
- Top-performing departments.
- Top-performing branches or locations.
- Lowest-converting organisational groups.
- Highest-performing employee cohorts.

Use rates alongside volumes so large units do not appear successful based on volume alone.

Attention and exception panel

- Customers awaiting action beyond the approved period.
- Failed consent and attestation delivery.
- Failed identity verification.
- AML or eligibility referrals.
- Duplicate or existing-customer outcomes.
- Pending account creation.
- Artefact-synchronisation failures.
- Customers awaiting AccessMore activation.
- Customers awaiting first transaction.
- Suspicious or unusual employee activity.

Each alert should show the count, oldest case and link to the relevant queue.

Campaign summary and leaderboard preview

- Current active campaign and period.
- Participating employees.
- Total, provisional and finalised points.
- Employees with points at risk.
- Current tier distribution.
- Promotion and relegation counts.
- Top five employees within the selected scope, with points, league, accounts opened, activation rate and first-transaction conversion.

9. Data Architecture & Reporting Model

Design principle

Staff Assist should retain the onboarding journey, staff-to-customer attribution and the unique identifiers required to link each account and customer to the initiating employee. Authoritative commercial, financial and digital-performance values should be obtained from the applicable source systems and curated for reporting, rather than manually maintained in the Admin Portal.

Authoritative source mapping

Information	Authoritative source	Portal use
Initiating staff, Staff ID and journey reference	Staff Assist	Attribution, journey tracking and employee performance.
Staff organisational hierarchy	Microsoft Active Directory / approved HR source	Access scope, group roll-up and leaderboard grouping.
Account-created status, account number and opening reference	Account-opening service / FLEXCUBE	Account-opened metric and account detail.
Funding status and account balance	FLEXCUBE / approved core-banking data source	Funded accounts, funding rate, deposit mobilisation and average balance.
Transaction status and qualifying transactions	FLEXCUBE, payments platform or approved transaction feed	Transacting-customer and campaign milestone calculations.
AccessMore registration and digital activation	AccessMore	Digital activation and customer milestone tracking.
Consent and account-opening artefacts	Account Opening Portal on Service Central	Evidence, audit retrieval and artefact reconciliation.
Campaign targets, rules and reward schedules	Campaign configuration service / approved campaign owner inputs	Target achievement, leaderboard and reward eligibility.
Calculated metrics and reporting outputs	Staff Assist Reporting Data Mart / DMO analytics layer	Dashboard, historical trends, drill-down and reports.

Required join keys

- Staff ID.
- Journey reference.
- Referral or attribution ID.
- Customer ID.
- Account number.
- Account-opening reference.
- Campaign ID.
- Source-channel identifier.
- Event date and timestamps.

Reporting data model and refresh

- Use a curated Staff Assist Reporting Data Mart / DMO analytics store for dashboard and historical reporting.
- Use approved APIs, events or scheduled data interfaces to ingest data from source systems; avoid direct portal-to-database coupling.
- Store source-system references, event timestamps and calculation-version identifiers for traceability.
- Support near-real-time events for onboarding and activation milestones, with approved periodic refresh for balances, funding and campaign measures.
- Reconcile aggregated dashboard values to underlying source records and expose unresolved data-quality exceptions to authorised users.

Architecture alignment for design

Layer	Required components
Presentation	Staff Assist Mobile Application; Customer Consent and Attestation Web Form; Admin Portal / DMO Portal.
Business services	Authentication; Staff attribution; Onboarding orchestration; Consent and attestation; Identity verification; Facial verification; AML and eligibility; Account creation; Notification; Campaign and target management; Leaderboard; Reward eligibility; Reporting and analytics; Artefact synchronisation; Exception management; Audit and traceability.
Integration	API Gateway; SUSE; ESB; approved event or scheduled data interfaces.
Enterprise systems	Active Directory / Entra; HR source; FLEXCUBE; AccessMore; Service Central; email and SMS; facial-verification provider; AML services; DMO data platform.
Data	Staff Assist operational database; Redis; Reporting Data Mart; Service Central artefact repository; protected audit-log store.

TRB alignment decisions

- The presentation layer must show the mobile application, customer consent form and Admin Portal, not Mobile only.
- No OTP service or OTP interaction is included in the Staff Assist onboarding journey.
- Add an explicit Consent and Attestation Service that generates the customer link, presents approved content, records responses and versions, and notifies Staff Assist on completion.
- Add account-balance, funding, transaction, campaign-target, campaign-metrics and reward-eligibility interfaces for DMO reporting.
- AccessMore, FLEXCUBE and Service Central should be consumed through approved services or integration interfaces rather than direct application database access.
- Every account-opening record must carry a source-channel identifier to distinguish Staff Assist from AccessMore self-service onboarding.

10. Onboarding Journeys

Journey list

- Journey reference.
- Customer name or masked identifier.
- Masked phone number.
- Masked email address.
- Initiating employee.
- Staff ID.
- Department or unit.
- Branch or location.
- Account type.
- Current stage.
- Current status.
- Date initiated.
- Last updated.
- Journey age.
- Account number, where created.
- AccessMore activation status.
- First-transaction status.
- Artefact-synchronisation status.
- Reward status.
- Action required.

Filters

- Journey stage and status.
- Date.
- Employee and staff ID.
- Department and branch.
- Entity and account type.
- Customer-action status.
- Identity-verification outcome.
- AML outcome.
- Duplicate-account outcome.
- Account-opening outcome.
- Activation and transaction status.
- Artefact-synchronisation status.
- Reward status.

Saved views

- Awaiting customer action.
- Identity verification failed.
- Existing customers detected.
- Accounts opened but not activated.
- Artefacts pending synchronisation.

- Journeys older than the approved SLA.

Journey list actions

- View journey.
- Resend consent and attestation link.
- Assign exception owner.
- Add operational note.
- Cancel an eligible journey.
- Retry an approved technical activity.
- Open artefact record.
- Export an authorised record.

Bulk actions should be restricted to safe activities such as assignment or export. There must be no bulk override of identity, AML or account-opening outcomes.

11. Journey Detail

The journey detail page should be the central investigation view.

Header

- Journey reference.
- Customer name.
- Current overall status.
- Account number, where created.
- Account type.
- Initiating employee.
- Date initiated.
- Last updated.
- Journey age.
- Action required.
- Visual journey timeline.

Tabs

Tab	Content
Overview	Customer contact details; initiating employee and organisation; account type; current stage; key timestamps; current next action.
Customer Actions	Link delivery and email validation; Terms acceptance; Privacy Consent; declarations and attestations; submission timestamp; content versions; customer-action reference. The headline may state "Customer requirements completed", with expandable completion details.
Identity and Checks	BVN/NIN and date-of-birth outcomes; facial and liveness outcomes; AML, duplicate-account, existing-customer and eligibility outcomes; service references and timestamps. Sensitive AML information is restricted by role.
Account and Artefacts	Account-opening status and reference; account and alternate account numbers; product; date opened; repository status and reference; last sync attempt; retry count; expected artefacts. Artefacts are read-only after submission.
Activation and Rewards	AccessMore registration; activation date; first qualifying transaction; Tier 3; employee and customer reward statuses; provisional and final points.
Audit Trail	Chronological employee, customer, system and administrator actions, including resends, retries, assignments, notes, versions and status changes.

12. Exceptions

Exception queues

- Consent and attestation delivery failures.
- Expired customer links.
- Identity mismatches.
- Facial-verification failures.
- AML referrals.
- Duplicate accounts.
- Existing customers.
- Eligibility failures.
- Account-creation failures.
- Pending or uncertain account-opening outcomes.
- AccessMore activation delays.
- Transaction milestone delays.
- Reward exceptions.
- Suspicious employee activity.

Exception list fields

- Exception type.
- Journey reference.
- Customer identifier.
- Initiating employee.
- Organisational unit.
- Date raised.
- Age.
- Priority.
- SLA status.
- Assigned owner.
- Current status.
- Last action.
- Recommended next action.

Exception detail and actions

- Summary and system outcome.
- Permitted supporting information and service references.
- Journey timeline and previous retries.
- Notes and approved attachments.
- Owner and SLA.
- Resolution history.
- Assign owner.
- Add note.
- Request additional review.
- Retry approved service call.
- Resend customer communication.
- Route to Compliance or Operations.
- Resolve with an approved reason.
- Escalate.

No generic override

Where a regulated override is ever permitted, it must be role restricted, reason based, subject to approval, fully logged and clearly separated from the original system result.

13. Artefact Reconciliation

Purpose

Monitor the synchronisation of Staff Assist account-opening records and artefacts into the existing account-opening records portal used for AccessMore.

Summary metrics

- Records successfully synchronised.
- Records pending synchronisation.
- Failed synchronisations.
- Records exceeding SLA.
- Automatic retries in progress.
- Records requiring manual investigation.

Reconciliation list

- Journey reference.
- Account-opening reference.
- Account number.
- Customer identifier.
- Date account opened.
- Expected artefact count.
- Successfully stored artefact count.
- Repository reference.
- Synchronisation status.
- Last attempt.
- Retry count.
- Last error.
- Owner.

Reconciliation detail and actions

- All expected artefacts and individual status.
- Date generated and submitted.
- Storage acknowledgement and repository identifier.
- Failure message, retry history and notes.
- Retry synchronisation.
- Reconcile status with the repository.
- Assign an owner.
- Add a note.
- Deep link into the existing records portal.
- Export reconciliation details.

A retry must not recreate the account or create duplicate artefact records.

14. Staff & Organisation

Staff directory

- Employee name.
- Staff ID.
- Email address.
- Department.
- Unit.
- SBU.
- Branch or location.
- Entity.
- Employment status.
- Standard Staff Assist access status.
- Elevated portal role.
- Current campaign.
- Current league.
- Current points.
- Accounts opened.
- Activation rate.
- Last Staff Assist activity.

Employee information should be obtained from the approved NT or HR source and should not be manually editable.

Staff performance detail

- Journeys initiated.
- Accounts created.
- Conversion rate.
- AccessMore activations.
- First qualifying transactions.
- Tier 3 upgrades.
- Current score.
- Provisional and final points.
- Current league and rank.
- Daily or weekly goals.
- Streak.
- Points at risk.
- Customers requiring attention.
- Exceptions attributed to the employee.
- Unusual activity alerts.

Organisational hierarchy

- Entity.
- Directorate.
- Division.
- SBU.
- Department.
- Unit.
- Region.
- Branch or location.
- Reporting hierarchy.

Hierarchy values should feed dashboard filters, leaderboard groups and management access scopes.

15. Campaigns & Rewards

Reward programme separation

The portal must maintain distinct administration, calculation and reporting for employee Staff Rewards and customer DiamondXtra Rewards. Customer reward values must never be added to employee points or employee reward eligibility.

Staff Rewards

The current campaign materials define Grand Finale, Milestone and Sustaining Momentum reward categories. The design should treat these as configurable schedules rather than hard-coded values.

Grand Finale rank	Reward
National Champion	Brand-new SUV
1st Runner-up	International return trip for two
2nd Runner-up	Five-star luxury weekend: dinner, spa and overnight stay
4th-10th	₦200,000 each
11th-25th	₦100,000 each
26th-50th	₦50,000 each
Milestone	Reward
First to fund 50 accounts	Soundcore Space One Pro / AirPods
First to fund 100 accounts	Samsung or Apple Smart Watch
First to fund 200 accounts	Tablet
First to fund 300 accounts	iPhone Pro Max
Sustaining Momentum position	Monthly reward
Best-performing Operating Business Group	₦300,000 and trophy
2nd Place	₦200,000
3rd Place	₦100,000

Sustaining Momentum eligibility gates

- Month 1: minimum 80% of the approved monthly account-count and CASA targets achieved among the 35 approved groups.
- Month 2: minimum 80% of the approved cumulative account-count and CASA targets achieved among the 35 approved groups.
- Month 3: minimum 80% of the approved cumulative account-count and CASA targets achieved among the 35 approved groups.
- The portal must validate the eligibility gate before ranking or approving a reward.

Customer Rewards - DiamondXtra Season 18

Customer rewards are a separate customer proposition. They may be displayed for campaign administration and customer communication, but must not be combined with employee Onboard & Earn points.

Monthly tier	Criteria	Reward	Rewardees
Tier 1	Balance increase of at least ₦20,000 per month and minimum 5 transactions	₦10,000	Top 200 customers
Tier 2	Balance increase of at least ₦100,000 per month and minimum 10 transactions	₦20,000	Top 100 customers
Tier 3	Balance increase of at least ₦200,000 per month and minimum 15 transactions	₦40,000	Top 100 customers
Quarterly tier	Criteria	Reward	Rewardees
Tier 1	Balance increase of at least ₦300,000 maintained for 3 consecutive months and minimum 50 transactions	₦1,000,000	One customer
Tier 2	Balance increase of at least ₦500,000 maintained for 3 consecutive months and minimum 50 transactions	₦5,000,000	One customer

Reward administration screens and controls

- Reward Programme List: programme, category, period, eligible population, qualification rule, winners, approval and fulfilment status.
- Reward Eligibility: employee or group, position, accounts opened, funded accounts, deposit mobilised, target achievement, gate result, proposed reward and validation status.
- Reward lifecycle: Tracking; Potentially eligible; Qualified; Under review; Approved; Awaiting fulfilment; Fulfilled; Rejected; Reversed.
- Automated calculation from validated metrics, duplicate-winner prevention, tie-breaking rules and supporting evidence.
- Maker-checker approval for high-value rewards and all manual adjustments.

- Fulfilment reference, adjustment reason and complete audit trail.
- The current campaign headline targets, including account-count and CASA mobilisation targets, must be configurable and version controlled rather than hard coded.

Campaign list

- Campaign name.
- Status.
- Start and end dates.
- Eligible staff scope.
- Participants.
- Milestones.
- Points issued.
- Reward status.
- Configuration version.
- Last updated by.

Statuses: Draft, Pending approval, Scheduled, Active, Paused, Completed and Archived.

Campaign configuration

- Campaign name and description.
- Campaign period.
- Eligible entities and staff groups.
- Eligible account types.
- Milestones.
- Provisional and final point rules.
- Activation requirements.
- Qualifying transaction rules.
- Tier 3 upgrade rule.
- Daily or weekly quests.
- Streak rules.
- League tiers.
- Promotion and relegation zones.
- League reset frequency.
- Comparison groups.
- Reward tiers.
- Point-expiry or reversal rules.
- Customer reward rules, where applicable.

Milestone configuration

Examples include Account created, AccessMore activation, First qualifying transaction and Tier 3 upgrade. For each milestone show point value, provisional/final status, event source, validation rule, duplicate-counting rule, reversal rule and effective date.

Approval, versioning and reconciliation

- Drafting, preview, approval and scheduled publication.
- Version history and rollback to an approved version.
- Published configuration must not be silently edited.
- Eligible staff, reward tier, fulfilment reference and outcome.
- Manual adjustments must require reason, supporting reference, approval where required and a complete audit trail.

16. Leaderboard

Views

- Current and previous periods.
- League view.
- Enterprise and entity view.
- Directorate or division view.

- SBU and department view.
- Branch or region view.

Fields

- Rank.
- Employee name.
- Staff ID, where appropriate.
- Organisational unit.
- League.
- Points.
- Accounts opened.
- Activation rate.
- Qualifying transactions.
- Movement since the previous period.
- Promotion or relegation status.
- Reward status.
- Deposit mobilised.
- Funded accounts and funding rate.
- Account-count target achievement.
- CASA target achievement.
- Reward eligibility gate result.

League management

Reflect the employee application's Bronze, Silver, Gold, Platinum and Diamond leagues. Configuration should support point thresholds, group size, promotion zone, relegation zone, reset period, reward description and comparison-group rules.

Controls

- Filter and search.
- View calculation breakdown.
- Investigate anomalous scores.
- Export leaderboard.
- View historical periods.
- Apply approved public-display preferences.
- Correct an invalid milestone through an approved adjustment process.

Administrators should not directly type over an employee's total score without an adjustment record.

17. Reports & Analytics

Standard reports

1. Acquisition Performance Report.
2. Onboarding Funnel Report.
3. Customer Drop-off Report.
4. Staff Participation Report.
5. Employee Performance Report.
6. Entity, Region and Branch Performance Report.
7. AccessMore Activation Report.
8. Qualifying Transaction Report.
9. Tier 3 Upgrade Report.
10. Campaign Points and Rewards Report.
11. Leaderboard Report.
12. Exception and SLA Report.
13. AML and Eligibility Outcome Report.
14. Duplicate and Existing-Customer Report.
15. Consent and Attestation Completion Report.
16. Communication Delivery Report.
17. Artefact Reconciliation Report.
18. Audit and Administrative Activity Report.
19. DMO Seven Metrics Report.
20. Deposit Mobilisation and Funding Report.
21. Campaign Target Achievement Report.
22. Staff Reward Eligibility and Fulfilment Report.
23. Customer Reward Eligibility Report.
24. Data Quality, Refresh and Source Reconciliation Report.

Report functions

- Filtering and drill-down.
- Saved views.
- Export to CSV or approved spreadsheet format.
- Export to PDF where required.
- Scheduled delivery where approved.
- Access-controlled report fields.
- Report-generation audit trail.

18. Consent & Attestation Content

Purpose

Allow authorised Product, Legal and Compliance users to manage the customer form completed through the consent and attestation link. This should be a controlled, template-based form builder rather than an unrestricted website builder.

Supported components

- Introductory text.
- Yes/No declaration.
- Single-select question.
- Checkbox attestation.
- Conditional follow-up question.
- Expandable Terms and Conditions.

- Expandable Privacy Notice and Consent.
- Review-and-submit page.
- Submission confirmation.

Content categories

- Cryptocurrency attestation.
- PEP declaration.
- FEP declaration, where applicable.
- Country-of-residence declaration.
- Terms and Conditions.
- Privacy Notice and Consent.
- Final customer confirmation.

Content-management functions

- Create a draft version.
- Edit approved text.
- Define whether a question is mandatory.
- Define conditional follow-up questions.
- Preview the form on mobile and desktop.
- Preview the complete customer journey.
- Submit content for approval.
- Schedule an approved version.
- View version history.
- Roll back to a previous approved version.

Rules

- No answer should be preselected.
- Legal acceptance should use checkboxes rather than toggle switches.
- Yes/No declarations should use radio buttons.
- Published records must retain the exact content version presented to the customer.
- Previously completed submissions must not change when a new version is published.
- Every change must be auditable.

19. Communications

Templates

- Consent and attestation invitation email.
- SMS notification.
- Link reminder.
- Link expiry notification.
- Customer-requirements completion confirmation.
- Account-created communication.
- AccessMore registration guidance.
- Activation reminder.
- First-transaction reminder.
- Customer reward communication, where applicable.

WhatsApp must not appear as a channel for the current implementation.

Template functions

- Draft.
- Preview.
- Test send.
- Approval.
- Scheduled publication.
- Version history.
- Rollback.

- Dynamic variables.

Variables may include preferred customer name, masked email, journey reference, employee name where approved, account type, account and alternate account numbers, link expiry and campaign reward information.

Delivery monitoring

- Sent.
- Delivered.
- Opened, where available.
- Failed.
- Bounced.
- Expired.
- Resent.

20. Access Management

Standard access

Every eligible employee with an active NT profile receives the standard Staff Assist employee capability. The Admin Portal is restricted to approved elevated roles.

Access-management screens

- User search.
- Current roles.
- Organisational scope.
- Role-request status.
- Effective date.
- Expiry date for temporary access.
- Approval history.
- Last login.
- Account status.

Role assignment

- Requested role.
- Requested scope.
- Business justification.
- Approver.
- Effective date.
- Expiry date where applicable.

Role matrix and lifecycle

- Read-only matrix of what each role can view, create, configure, export, approve, retry and resolve.
- Automatic removal following staff exit or NT disablement.
- Immediate revocation.
- Periodic access review.
- Dormant elevated-access review.
- Temporary-role expiry.
- Complete access-change logging.

21. Audit Logs

Audit list

- Date and time.
- User.
- Staff ID.
- Role.
- Module.

- Action.
- Record affected.
- Previous value, where applicable.
- New value, where applicable.
- Outcome.
- Source IP or device information where approved.
- Reason.
- Approval reference.

Audited actions

- Login and failed login.
- Sensitive record view.
- Journey update.
- Link resend.
- Exception assignment.
- Retry.
- Resolution.
- Campaign change.
- Point or reward adjustment.
- Content change.
- Communication-template change.
- Role assignment or removal.
- Report export.
- Artefact access.
- Configuration change.

Controls

- Read-only.
- Searchable.
- Filterable.
- Exportable by authorised roles.
- Protected from alteration.
- Retained in accordance with Bank policy.

22. System Health

Integration status

- NT and staff-identity service.
- Email-delivery service.
- SMS service.
- Consent and attestation service.
- BVN service.
- NIN service, where applicable.
- Facial-authentication service.
- AML-screening service.
- Duplicate-account service.
- Account-opening service.
- Artefact repository.
- AccessMore activation events.
- Transaction events.
- Reward or scoring service.
- Account-balance and funding service.
- Deposit-mobilisation / Treasury-approved data feed.
- Transaction and qualifying-transaction service.
- Campaign target service.
- Campaign metrics and Reporting Data Mart feed.
- Reward-eligibility and fulfilment-status service.

Health indicators

- Current status.
- Last successful request.
- Failure rate.
- Average response time.
- Pending queue.
- Open incident.
- Last updated.

Use Operational, Degraded, Unavailable and Maintenance. Business users should see simplified service status; technical users may access detailed logs and references.

23. Support Content

The portal should provide controlled management of frequently asked questions, common error explanations, support telephone number, support email, escalation guidance, operating hours, employee help content, version history and publication status.

Suggested FAQ categories

- AML referral.
- Duplicate customer.
- Consent and attestation link not received.
- Facial verification not starting.
- Points reduced or not awarded.
- Customer cannot be onboarded again.
- Journey closed midway.
- NT login issue.

24. Status Language

Category	Approved labels
Journey statuses	Draft; Link sent; Awaiting customer action; Customer requirements completed; Identity verification in progress; Account-opening checks in progress; Ready for account creation; Account created; Awaiting AccessMore activation; Activated; Awaiting qualifying transaction; Qualifying transaction completed; Completed; Expired; Cancelled; Failed; Exception; Additional review required.
Artefact statuses	Not yet generated; Pending synchronisation; Synchronising; Stored successfully; Failed; Reconciliation required.
Reward statuses	Not yet eligible; Provisional; Eligible; Pending fulfilment; Fulfilled; Failed; Reversed.

Visual status colours

Colour	Meaning
Green	Completed or successful.
Amber	Pending, expiring or attention required.
Red	Failed, blocked or overdue.
Blue	Processing or active.
Grey	Draft, inactive, cancelled or not started.

Never rely on colour alone; always include a text label and icon.

25. Data Privacy and Security Requirements

- Customer-data masking by default.
- Role-based display of customer fields.
- Full BVN and NIN concealment.
- No customer PIN, password or OTP display.
- No customer credential fields.
- No casual display of facial images.
- Consent and attestation records read-only after submission.
- Reason capture before revealing particularly sensitive information, where required.
- Session-timeout warnings.
- Confirmation for consequential actions.
- Audit logging for downloads, exports and sensitive-record access.
- Watermarking of sensitive exports where required.

Verified customer information must not be editable through the portal. The portal must not provide a button that bypasses facial verification, AML screening, duplicate-account checks, existing-customer checks or account-opening eligibility rules.

26. Common UI States

- Loading.
- Empty results.
- No permission.
- No matching search results.
- Service unavailable.
- Partial data.
- Export in progress.
- Action successful.
- Action failed.
- Session expired.
- Record locked or under review.

Recommended copy examples

State	Copy
No journeys found	No onboarding journeys match the selected filters.
No exceptions require attention	There are currently no unresolved exceptions within your authorised scope.
Access restricted	You do not have permission to view this information. Contact the appropriate administrator if access is required.

State	Copy
Synchronisation pending	The account has been created, but its supporting artefacts are still being stored. The system will retry automatically.

27. Responsive and Accessibility Requirements

- Desktop-first.
- Responsive on approved tablets.
- Usable at standard enterprise laptop resolutions.
- Keyboard navigable.
- Screen-reader compatible.
- Sufficient contrast.
- Clear focus states.
- Large enough action targets.
- Plain-language errors.
- No horizontal scrolling except where unavoidable for large data tables.

Mobile access may support dashboard viewing and approvals, but complex configuration and reconciliation activities should be optimised for desktop.

28. Key Design Workflows to Prototype

1. Executive reviews overall performance and drills down by region.
2. Operations user finds and investigates a stuck customer journey.
3. Operations user resolves an artefact-synchronisation failure.
4. Compliance user reviews an AML-referred journey.
5. Supervisor reviews a staff member's performance and customers requiring attention.
6. Campaign administrator creates and publishes a campaign.
7. Campaign administrator reviews a disputed score.
8. Legal or Compliance user updates an attestation and publishes a new version.
9. Administrator updates an email template and performs a test send.
10. Access administrator assigns an elevated portal role.
11. Audit user searches and exports an administrative-action log.
12. Technical user reviews a degraded integration.
- 13. DMO user reviews the seven metrics at Overall Bank level and drills down to Operating Group, Business Unit and staff.
- 14. Campaign administrator validates a Sustaining Momentum eligibility gate and approves a reward.
- 15. DMO user investigates a delayed funding or balance feed and reviews the affected dashboard metrics.
- 16. Reward administrator separates Staff Rewards from DiamondXtra Customer Rewards during configuration and reporting.

29. Minimum Screens to Design

1. Portal shell and navigation.
2. Overview dashboard.
3. Onboarding journey list.
4. Journey detail.
5. Exception queue.
6. Exception detail.
7. Artefact-reconciliation list.
8. Artefact-reconciliation detail.
9. Staff directory.
10. Staff performance detail.
11. Campaign list.
12. Campaign configuration.
13. Leaderboard.
14. Reports library.
15. Report output and drill-down.
16. Consent and attestation content list.
17. Content editor and mobile preview.
18. Communication-template list.
19. Communication editor and preview.
20. Access-management list.
21. Role-assignment workflow.
22. Audit-log list.
23. System-health dashboard.
24. Support-content management.
25. No-access, empty, loading and error states.
26. DMO performance dashboard with the seven core metrics.

- 27. Metric definition, source and data-lineage view.
- 28. Staff Reward programme and eligibility screens.
- 29. Customer Reward programme and eligibility screens.
- 30. Reward approval and fulfilment-status workflow.
- 31. Data-source refresh and quality monitoring screen.

30. Out of Scope

- Customer completion of consent and attestations.
- Staff-facilitated customer identity verification.
- Direct account creation by an administrator.
- Editing verified customer identity information.
- Editing the customer's submitted declarations.
- Viewing or handling customer OTPs, PINs or passwords.
- Uncontrolled AML, duplicate-account or eligibility overrides.
- Replacing the existing account-opening artefact portal.
- WhatsApp configuration for the current implementation.
- A separate reward-payment engine where fulfilment is owned by another approved system.
- Manual editing of authoritative balances, funding, transaction, AccessMore activation or target data within the Admin Portal.
- Direct querying or editing of FLEXCUBE, AccessMore or Service Central operational databases by portal users.
- Customer reward payment or employee reward payment where fulfilment is owned by another approved platform.
- Combining DiamondXtra customer rewards with employee Onboard & Earn scores or rewards.

31. Success Criteria

- The seven DMO metrics are available at Individual Staff, Operating Group / Business Unit and Overall Bank levels.
- Every commercial metric displays an approved definition, source, refresh timestamp and data-quality status.
- Users can reconcile dashboard totals to underlying accounts and source-system references within their access scope.
- Staff Rewards and DiamondXtra Customer Rewards are separately configured, calculated, approved and reported.
- High-value rewards and manual adjustments follow maker-checker approval and are fully auditable.
- The design supports the mobile application, customer consent form and Admin Portal / DMO Portal as distinct presentation channels.
- A user can identify the overall programme position from the dashboard without opening a report.
- Operational users can find any journey using its principal references.
- The current status and next required action are immediately clear.
- Exceptions are presented as manageable queues with owners and SLAs.
- Artefact-synchronisation failures cannot result in duplicate account creation.
- Staff, campaign and leaderboard information align with the employee application.
- Sensitive customer data is masked and role controlled.
- Configuration changes require explicit action, approval and versioning.
- Every consequential administrative action is auditable.
- The portal supports enterprise-level oversight without allowing administrators to perform customer-controlled activities.

Design hand-off expectation

The UI/UX team should translate this brief into a desktop-first clickable prototype, validate the key workflows with Product, Operations, Compliance, Campaign, Audit and Information Security, and document any deviations before engineering hand-off.
